

What are the wind power generation platforms

What is a floating offshore wind platform?

A floating offshore wind platform (FOWP) is the concrete, steel or hybrid substructure on which the wind turbine is installed, providing it with buoyancy and stability. Some call it a "floating foundation", but this term is not correct because floating platforms are not founded on the seabed, but are anchored and moored.

Do offshore floating wind turbine platforms increase wind power capacity?

Author to whom correspondence should be addressed. This paper presents a literature review of the dynamics of offshore floating wind turbine platforms. When moving further offshore, there is an increase in the capacity of wind power.

What is a floating platform & how does a wind turbine work?

For instance, the floating platform draws on the design of offshore oil and gas production platforms and this application resists the wind load to improve stabilities. Instead, the wind turbine utilizes the wind load to stabilize the power generation.

Does complex platform motion affect the power generation of floating wind turbines?

The results show that combined longitudinal rocking motion reduces a floating wind turbine's average power generation, indicating that the complex platform motion can adversely affect the power generation of floating offshore wind turbines.

How can a multi-wind-turbine platform maintain stability?

Innovative methods for implementing an active ballast system for the floating platform can maintain stability. Design and testing of yaw control for the multi-wind-turbine platform can enable the wind turbines facing the wind at all times which also eliminates the need for a yaw system for the wind turbine.

What is the difference between a floating oil platform and a wind turbine?

However, the designs are not directly extrapolable. The main differences are: The loads on a floating wind platform are mainly dynamic due to the wind turbine, whereas on a floating oil platform the installed equipment transmits mainly static loads.
